

Employee Performance

Data-driven insights into employee satisfaction, salary, and performance trends

Presented by
Siyabonga Nkosi

Introduction

This project analyzes employee performance data focusing on satisfaction, salary, training, and termination trends

Key Questions

WHAT FACTORS INFLUENCE PERFORMANCE?

DOES TRAINING IMPACT OUTCOMES?

WHAT DRIVES TERMINATION?

Dataset Overview

Includes salary, satisfaction, and termination data

SQL Code

```
SELECT termination_reason, COUNT(*)  
FROM employee_performance GROUP BY  
termination_reason;
```

```
SELECT AVG(training_hours_last_year),  
AVG(manager_feedback_score) FROM  
employee_performance;
```

```
SELECT AVG(annual_salary),  
AVG(manager_feedback_score) FROM  
employee_performance;
```

Termination Reasons

Values

Average Salary

Findings

- Satisfaction scores vary across employees
- Salary does not strongly correlate with feedback scores
- Termination reasons vary

Insights

- Performance influenced by multiple factors
- Training contributes but is not the only driver
- Salary alone does not determine performance
- Employee satisfaction is critical

Recommendations

- Increase targeted training programs
- Improve employee engagement initiatives
 - Review salary structures carefully
 - Monitor satisfaction regularly

Conclusion

- Employee performance is multi-factor driven
- Data-driven decisions can improve outcomes
 - Continuous monitoring is essential
